MONOTONIZ

$$y'>0 \rightarrow Y(x)$$
 crece
 $y'<0 \rightarrow Y(x)$ Decrece

Singularidad

$$\lim_{x \to x_0} f(x,y) = \infty$$

Simetria

$$f(x) = y = f(-x) \Rightarrow$$
 Simetrica respeto de y se dice Par $f(-x) = -f(x) \Rightarrow$ II II respecto al origen se dice impar

$$y'(x) = y'(-x) \rightarrow Par$$

 $y'(-x) = -y'(x) \rightarrow impar$

isoclina

Permite marcar el compo direccional mediante f(xo, y)=k fijondo un Xo obtengo h (pendiente de f) en el punto Xo 5: adesma me dan un punto por el que pasa puedo obtener la solución particular

Modelos de deceimento radio activo

$$\frac{dN}{dt} = -r N$$

$$\frac{d^2 U}{dt^2} = -r \frac{d U}{dt} = r^2 \cdot U > 0$$

Vida media: Tiempo necesario para tener la mitad dela materia inicial

$$\frac{e^{rt_{WV}}}{2} = \frac{1}{2} \Rightarrow e^{-rt_{VM}} = \frac{1}{2} \Rightarrow -rt_{VM} = \ln\left(\frac{1}{2}\right)$$
